

Flat pressed straight branch with gasket

ILPL

Description

Flat straight branches are designed for connecting round SPIRAL or plain ducts to the main square ducts. This piece is also used for fabrication of expansion boxes in air supply diffusers and wall-mounted and ceiling air diffusers. As a result of the double EPDM rubber gasket, it is perfect for both low- and high-pressure systems, since the product meets requirements for air tightness class D according to EN12237.

Available materials - Product code example

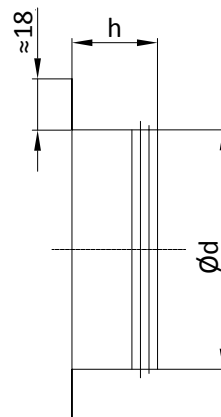

ILPL-... - galvanized steel sheet
